# Processing/Embedding Cassettes

AA today can manufacture and supply many models of cassettes for processing and embedding histological tissue specimens, most of which can be used with the automated cassette labeling instruments. The processing/embedding cassettes with 45° slanted angle are compatible with most of the cassette labelers on the market and another with 35° slanted angle can be used with a specific Sakura® cassette printers.

## Four formats for satisfying different applications:

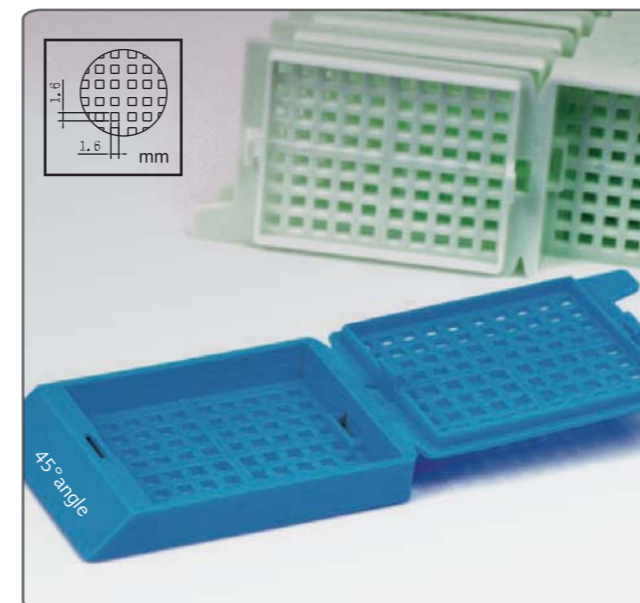

Taped and Sleeved Cassettes will be conveniently installed in the printing instruments without manual insertion.

## Biopsy Processing/Embedding Cassettes (EM 101&104)

One-piece & snap-latch design allows convenient one-hand operations, and helps relock the lid securely without danger of specimen loss

### EM 101 Biopsy Processing/Embedding Cassettes

- Made of P.O.M material, 100% resistant to chemical action of histological solvents
- With two large labeling areas on the cassette sides and one slanted front writing surface of 45° angle, adaptable to most of the cassette labelers
- With square holes in dimensions of 1.6mm x 1.6 mm

EM 104A Biopsy Processing/Embedding Cassettes

NEW

- Made of P.O.M material, 100% resistant to chemical action of histological solvents
- With square holes in dimensions of 0.9mm x 0.9 mm
- With two large labeling areas on the cassette sides and an improved slanted front writing surface of 45° angle, specially for the thermal transfer printing system

Biopsy Processing/Embedding Cassettes (EM 105)

Special hinge design locks the cassette and lid together firmly, and realizes more frequent opening & closing of the lid without any danger of specimen loss

- Made of P.O.M material, 100% resistant to chemical action of histological solvents
- With square holes in dimensions of 0.9mm x 0.9 mm
- With two large labeling areas on the cassette sides and one slanted front writing surface of 45° angle, adaptable to most of the cassette labelers
- Detachable lid easy to remove and re-insert
- pre-loaded by sleeves or tapes, considerably optimizing the user convenience

Biopsy Processing/Embedding Cassettes (EM 111)

Two-piece design provides simple inserting and fixing to lock the lid into the cassette securely, allows more frequent opening & closing of the lid, and easy & safe removal and inserting of lid from and into the cassette without any danger of specimen loss.

- Made of P.O.M material, 100% resistant to chemical action of histological solvents
- With square holes in dimensions of 0.9mm x0.9 mm
- With two large labeling areas on the cassette sides and one slanted front writing surface of 45°angle, adaptable to most of the cassette printers
- Pre-loaded by sleeves or tapes, considerably optimizing the user convenience

Biopsy Processing Cassettes (EM 115&116)

Two-piece design and features with large anterior & posterior slots, especially used for processing/embedding small biopsy specimens without the need of using biopsy pad, locking the lid securely without any danger of specimen loss as well as achieving ideal experimental effect

- Made of P.O.M material, 100% resistant to chemical action of histological solvents
- With 1280 square holes in dimensions of 0.26mm x0.26 mm, and over 40 large rectangle holes to maximize fluid exchange, thereby ensuring proper drainage
- With two large labeling areas on the cassette sides and one slanted front writing surface of 45°angle, adaptable to most of the cassette printers
- pre-loaded by sleeves or tapes, considerably optimizing the user convenience

EM 115 Biopsy processing Cassettes

One compartment, allowing for a greatly improved fluid exchange without having to use biopsy pads even with needle biopsies
