

ColorInx™ Microscope Slides

Identification and Traceability are undoubtedly the no. 1 essential factors for ensuring an accurate clinical diagnosis. As well known, 2-D barcode based marking is more cost-effective and labor-free than the conventional labeling system. Nowadays, **AA**® ColorInx™ microscope slides have successfully assisted the 2-D barcode based printers to enhance the assurance of the specimen identification and traceability.

The **AA**® ColorInx™ microscope slides are printed with silky color coating and the coating is resistant to all common chemicals and routine stains that are utilized in laboratory.

CAUTION:

1. The color frosted layer may fall off the glass when caustic conditions are applied
2. The smaller the barcode size is, the worse the scanning effects might be
3. Suggested to adjust the parameters of printers if the printing code is not clear.

ColorInx™ Microscope Slides adaptable to Etching Slide Printers

Recommended for marking with etching slide printers

- Dimensions: 25.0mm×75.0mm, Thickness: 1.1±0.1mm
- Color frosted areas of approx. 20 mm depth, distribute on both sides but at the same slide end for marking
- A black background color helps increase contrast on the marking area
- Color frosted areas are resistant to all common chemicals and routine stains that are utilized in the laboratory
- Beveled edges provide utmost safety during manual operations
- Various colors are supplied depending on your requirements

-72/PK
Packaging: 72pcs/box, 1,440pcs/carton
