

DOP-9280

Color Doppler Ultrasound Diagnosis System

Real face to clinical ultrasound diagnosis.	
Simple the complex operating process.	
Fully match the requirements of the most practical clinical functions.	
With solutions of updatable digital system	
Scanning Techniques	Electronic linear scanning; Convex scanning; Annular array sector scanning;
Scan Mode	2D (B mode), TM (M mode), PW, CFM
Display Mode	Single frame B/ Dual-frame B/ Quad-frame B
Cine-loop	282 2D images, 128 color images
Gray Scale;	256 white-black gray scale
Color Shade	128 color shade
3D reconstruction technology: provide most practical 3D reconstruction software packing	
Digital image file management and network communication system	
80G main unit hard-disk, disk and CD memory, USB connector, DICOM output and input	
Ultrasound workstation	
Probe connector : 3	
17 inches high-resolution color monitor	
Probes	Probes for abdomen; cardiology; small parts; perivascular; galactophore; pediatric; muscle cadre; endocavitary (vaginal, rectum), transcranial. Common probes can together with piercing shelf.
	Probe characteristic----exceed wide frequency band (1.5-18MHz), multi-frequency
	Probe types----Convex; Linear; Annular sector; Pencil
	Probe application----multi-frequency; multi-technology (M.M.T)
